STATISTICS

OF

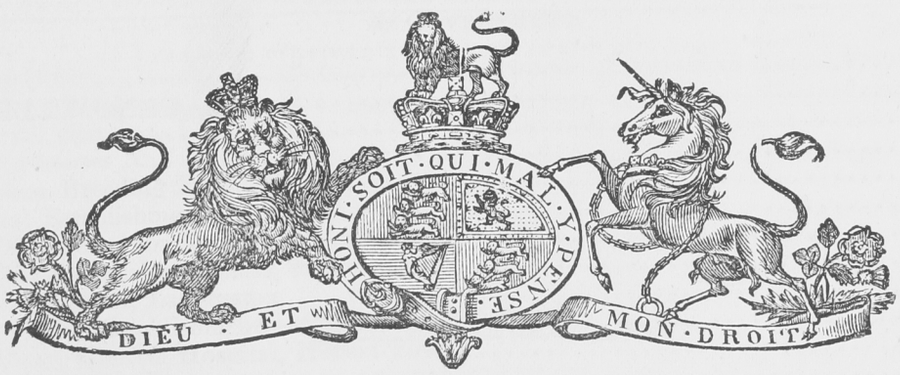

THE COLONY OF TASMANIA

FOR THE YEAR

1867.

COMPILED IN THE OFFICE OF THE STATISTICIAN FROM OFFICIAL RECORDS.

PRESENTED TO BOTH HOUSES OF PARLIAMENT BY HIS EXCELLENCY'S COMMAND.

Tasmania:

JAMES BARNARD, GOVERNMENT PRINTER, HOBART TOWN.

1868.

TO THE HONORABLE THE COLONIAL SECRETARY.

Legislative Council Office, Hobart Town, July 20, 1868.

SIR,

I HAVE the honor to append hereto the Statistics of this Colony for the past year, 1867.

In these, some improvements and additions which the experience of the preceding year has suggested, have been introduced; and some corrections have been made.

It is gratifying to me to find, that although some inaccuracies have been discovered in my first year's work, they are not of sufficient importance to affect its usefulness as a Statistical Record. I have observed with some satisfaction the increased value which seems to be attached to these publications; for it can hardly be questioned that a careful consideration and "gathering up" of the facts which these records of our national life present, in order to obtain a correct knowledge of our capabilities and deficiencies, is the first step towards the development of the now neglected resources of this Colony. From several quarters I have had spontaneous offers of assistance in the way of supplying additional matter; and I take this opportunity of expressing my acknowledgments to those who made them; and also to all who kindly responded to appeals made to them for extra-official information.

I am sorry to say, however, that in some cases the greatest trouble has been experienced in obtaining the information required. Any such neglect to furnish returns, as well as any want of accuracy in making them up, increase, to an extent that can hardly be conceived by any one who has not experienced it, the labour and anxiety of compiling these Statistics; and I shall be glad indeed if this reference to the inconvenience may have the effect of producing an improvement in this respect on future occasions.

I.—POPULATION.

Population.

The population, as estimated at the end of the year 1867, was 98,455, being an increase upon that of the preceding year of 1087 souls, or 1·116 per cent. In 1866 the rate of increase was 2·28 per cent.; so that it has been lessening by about one half. In England, in 1867 it was 1·037 per cent.; in Victoria, 2·514 per cent.; in New South Wales (1866), 4·87 per cent.; in South Australia (average for 3 years), about 5 per cent.;* in Queensland (1866), 9·57 per cent.

On reference to the Return of Immigration and Emigration during the year, it will be found that there was an actual loss of population, by persons leaving the Colony, to the extent of 466; the number of departures having by so many exceeded the number of arrivals. In 1866 there appeared to be an increase of population by arrivals of 690 souls; but in my Report for that year, I expressed my belief that most of these would "appear in the next year among the departures, as being visitors from the other Colonies, who would return thither in the early part of the next year." This exodus now appears to have taken place.

The excess of Births over Deaths in 1867 was 1558.† The following table will show how the rate of increase from this source has varied during the past ten years:—

---

* Report of Government Statist for 1866.

† Not including the Deaths which took place beyond the limits of the Colony.

Year.	*Births.*	*Deaths.*	*Increase per Cent. of Population.*	*Year.*	*Births.*	*Deaths.*	*Increase per Cent. of Population.*
1858.....	3138	1560	1·869	1863.....	2998	1418	1·726
1859.....	3244	1406	2·126	1864.....	3031	1433	1·713
1860.....	3238	1740	1·701	1865.....	3069	1263	1·897
1861.....	3207	1472	1·923	1866.....	2805	1323	1·522
1862.....	3149	1357	1·975	1867.....	2971	1413	1·582
	Mean.....		1·919		Mean.....		16·88

It thus appears, that in the latter half of the past decenniad, the natural ratio of increase had diminished by 0·231, or 12·037 per cent., as regards the ratio for the former half. If the same law of decrease should continue to prevail, in the same degree, in little more than seven years hence all accession to the population from excess of Births over Deaths would entirely cease, that is, the Death-rate would equal the Birth-rate, and unless the tide of Immigration should set towards this Colony, the population would after that time begin to decrease. Under the head of "Vital Statistics," I remarked, last year:—"The Births, therefore, are diminishing more rapidly than the Deaths; so that, unless this effect be interrupted by external causes, the natural increase to the population will gradually become less and less." The results deduced from the above table afford additional evidence to the truth of this fact. We need not go far to seek for the cause of this declension. A constant stream of Emigration is going on, draining the Colony of the more vigorous and enterprising portion of its people—the most valuable part—and leaving behind only the aged and children.

This is an evil which has frequently been made the subject of discussion, and various remedies have been suggested. But it is evident that no direct remedy can be applied. The influx and efflux of population, no less than trade, is governed by certain laws, and subject to certain conditions. Those laws, indeed, cannot be controlled; yet the conditions which modify their operation may sometimes, by a wise and far-seeing course of procedure, be so far regulated as to mitigate a threatened evil. There are, if I mistake not, some causes (which will be more particularly specified under another division) already at work, which may be expected before long to bring about a reaction. In the mean time, it is incumbent on all who are anxious for the prosperity of this Colony, by every means in their power, to advance the cause of moral, intellectual, and material progress. So long as Tasmania lags behind her neighbours in the exhibition of mental activity, and in the application of science to the common purposes of life; so long will her life-blood be drained away, and the flower of her youth be driven to other shores, to take that place in the world's race of progress, which is denied to them in a country where utter stagnation has hitherto blocked up every avenue to material improvement. As production increases, so will population increase also; and the most obvious way to bring about such a desirable result, is to create, by the judicious employment of capital, such an increased demand for labour, that an additional supply may be required in order to satisfy it.

During the year, 3559 persons arrived in the Colony, (including 56 Bounty Immigrants), and 4025 left it; being a loss to the population, as already mentioned, of 466 souls.

II.—Trade, Commerce, and Navigation.

The value of the Imports in 1867 amounted to £856,348, and of the Exports to £790,494, the former exceeding the latter by £65,854. As compared with the figures of the preceding year, there was a decrease of £25,759 on the Imports, and of £44,112 on the Exports.

The Imports in 1867 were at the rate of £8 13*s.* 11½*d.* per head; the Exports at the rate of £8 0*s.* 7*d.* per head. In 1866, the rates per head were, Imports, £9 1*s.* 2¼*d.*; Exports, £8 11*s.* 5¼*d.*

The Exports, as will be seen by the subjoined table, which shows the variations in our commerce for the last ten years, were less in 1867 than in any of the nine preceding years—indeed they have not been so limited since 1851.

YEARS.	IMPORTS.			EXPORTS.		
	Total Value.	*Difference.*		*Total Value.*	*Difference.*	
		Increase.	Decrease.		Increase.	Decrease.
	£	£	£	£	£	£
1858.....	1,328,612	—	—	1,151,609	—	—
1859.....	1,163,907	—	164,705	1,193,898	42,289	—
1860.....	1,068,411	—	95,496	962,170	—	231,728
1861.....	954,517*	—	113,894	905,463	—	56,707
1862.....	857,423	—	97,094	919,649	14,186	—
1863.....	902,940	45,517	—	999,511	79,862	—
1864.....	908,265	5325	—	975,730	—	23,781
1865.....	762,375	—	145,890	880,965	—	94,765
1866.....	882.107†	119,732	—	834,606	—	46,359
1867.....	856,348	—	25,759	790,494	—	44,112

It will be observed that in 1865, the Imports were extremely low,—indeed, at their very lowest; in 1866, they exceeded those of the previous year by £119,732. The natural consequence of this was a corresponding falling off in the quantity of goods imported in 1867, to the extent of £25,759.

The constant falling off in the Export trade is matter of serious consideration. For although it is perfectly true that the wealth of a country is not to be measured by the excess of Exports over Imports, still in a colony like this, where the Exports consist, not of articles manufactured from raw materials brought from abroad, but chiefly of those which are produced directly from the soil, such as grain, wool, fruit, hops, and timber; it is evident that a decline in the Exports must indicate a decline in the quantity of produce raised from the soil, and a corresponding retrogression of the agricultural and pastoral interests—locally the two great sources of production. It is important, too, to observe that while the profits derived from imported goods benefit the non-producing‡ classes only, those arising from the export of articles of Colonial production go into the pockets of the producers (besides affording employment to labour and a second or third profit to non-producers), and thus tend to retain and attract the most valuable part of the population of a country.

The Imports and Exports in 1867 were distributed among the different countries thus:—

	IMPORTS.	EXPORTS.	PROPORTION PER CENT. OF TOTAL	
			Imports.	*Exports.*
	£	£	£	£
United Kingdom.....	299,892	378,532	35·02	47·89
Victoria	432,347	223,879	50·49	28·32
New South Wales.....	49,715	70,157	5·80	8·88
South Australia.....	—	26,260	—	3·32
Queensland	8875	14,076	1·04	1·78
New Zealand.....	5058	75,057	0·59	9·49
Mauritius.....	54,051	2533	6·31	0·32
Foo Chow Foo	6410	—	0·75	—

A comparison of this table with the corresponding one for 1866 shows that with the United Kingdom both our Import and Export trade has considerably increased; with Victoria it has in both cases diminished; with New South Wales the Import trade has diminished, the Export has slightly increased; with South Australia (from which there are no Imports direct) the Exports have increased; with Queensland the Import trade has increased, the Export has diminished; with New Zealand the trade generally has increased to a considerable extent; with the Mauritius, as might be expected in consequence of the fever which raged there during the past year, trade has declined.

* In the Statistics of this year, p. 16, there is an error of £1000 in the addition, which was not observed last year.

† As corrected: *vide* p. 53.

‡ I use the term "non-producing classes" here in a popular sense, not as synonymous with "unproductive labour" as defined by Mr. J. S. Mill, Principles of Political Economy, Vol. 1, p. 61.

In regard to our commercial relations with the United Kingdom and Victoria it should be observed, that the above figures are somewhat deceptive, inasmuch as a considerable part of our Imports from the former are brought, not to this Colony direct, but by way of Victoria, and a proportionate part ought therefore to be transferred from the one to the other. Measures have been taken to remove this defect in the Customs returns for the current year, and also to render them more perfect in some other respects.

EXPORTS of certain Articles stated in the Customs Returns to be the Produce and Manufacture of the Colony, in the Year 1867.

Willows, pkgs.	222	203
		£773,796

Comparing the values of some of the principal Exports, as shown in the above return, with those for previous years, we arrive at the following results. Bark appears to have been exported in larger quantities than in any of the last eleven years. Beef and Provisions were much less than in last year, though more than in 1865. In Salt Meat, Tasmania can scarcely compete with the Australian Colonies, but in Hams and Bacon, as was shown in last year's report, there is a large market for her surplus in the neighbouring Colonies. Butter and Cheese were less than in the two preceding years; Breadstuffs, on the contrary, were nearly double the value of the Exports in those years. Oats and Barley have, on the whole, shown a constant decrease since 1857 (the furthest date to which it is convenient to extend the comparison), being less in 1867 than one-half of the value of the Exports in 1864, the next lowest value in the eleven years. Supposing the prices to be nearly the same, more than seven times as much Oats and Barley were exported in 1857 as in 1867. Hay and Chaff have diminished considerably compared with the value ten or eleven years ago, but in the last few years there is no striking variation. Hides, Skins, and Leather show a higher value than in any of the last eleven years. The production of Hops is very rapidly increasing. In 1867 the Exports were valued at £13,730, the maximum in the previous years being £6695. Horses show a small increase upon last year. Malt Liquor was exported only to the extent of 3511 gallons, valued at £537. I called attention to this article last year, and showed that in the Colonies of Victoria, New South Wales, and South Australia only, the Imports amounted in 1865 to £681,314. Besides these Colonies, there would be a large demand in Queensland, and New Zealand. Of Malt we exported absolutely none, and even the home market was chiefly supplied by the imported article. The quantity of Sperm Oil

exported decreased from 381 tons in 1866 to 241¾ in 1867. Eggs as an article of Export seem to be rising into some importance, the value last year being £1590. Timber shows an increase in value from £45,731 in 1866 to £51,747 in 1867; Vegetables a decrease from £38,452 to £22,808. Wool also shows a decrease in value from £385,405 to £378,977; the quantities being, in 1866, 4,765,221 lbs.; in 1867, only 4,686,224 lbs.

The following shows the quantity, value, and average price of Wool exported during the last eleven years.

Year.	*Quantity.*	*Value.*	*Price per lb.*	*Year.*	*Quantity.*	*Value.*	*Price per lb.*
	lbs.	£	*s. d.*		lbs.	£	*s. d.*
1857....	5,251,884	393,646	1 6	1863 ...	4,665,594	407,844	1 9
1858....	4,755,318	397,533	1 8	1864 ...	4,972,383	415,891	1 8
1859....	6,107,903	467,968	1 6¼	1865 ...	4.923,965	381,625	1 7
1860....	4,537,918	370,427	1 7½	1866 ...	4,765,221	385,405	1 7¼
1861....	4,103,369	326,413	1 7	1867 ...	4,686,224	378,977	1 7¼
1862....	5,241,650	366,350	1 4¾				
Average	4,999,674	—	1 6½	Average	4,802,677	—	1 7¾

It will be seen that, although the quantities fluctuate considerably, the average was higher in the former than in the latter portion of the period; while the average price has increased by one penny farthing per pound.

The following list shows that articles which might have been produced in the Colony, have been imported to the value of £118,846; or, omitting those which probably under present circumstances can be procured more cheaply from abroad than they can be produced at home, to the value of, say £100,000. In saying this, I wish to guard myself against being supposed to favour the now exploded notion, that to import for home consumption is adverse to a country's interests: I only desire to show that there is abundant room for increasing the amount of our produce, even to supply our own requirements, independently of foreign markets. In any case in which goods can really be imported cheaper than they can be produced here, it would, of course, be for the general benefit that they should be so imported; but then, the labour thus set free should be only diverted into other more profitable channels, and not be allowed to remain unproductive, as is, I fear, too often the case in this Colony.

IMPORTS of Articles capable of being produced in the Colony, in the Year 1867:—

The question how production, trade, and commerce may most effectually be stimulated and fostered, may be best answered by a reference to the history of free trade, or as it has been, perhaps, better styled, "unrestricted competition," in England. It has invariably been found, that whenever burdens upon trade have been removed, an improvement in the revenue, and in the condition of the people, has been the result.

Intercolonial Free Trade Bill.

I cannot quit this part of the subject without some reference to the Intercolonial Free Trade Bill, which the Secretary of State declined to entertain. The failure of that Bill to become law, must greatly retard the development of our commerce with the sister Colonies; but, it has nevertheless been productive of a large amount of good. It has called the attention of the Colonies interested to the advantages of a free interchange of products; and the generally favourable reception which it has met with, affords ground for hope that, before long, the subject of free trade as a general principle will be better understood. For it must soon become evident that if a partial application of the principle, such as was provided for by that Bill, be beneficial to those who might become parties to it, a more complete application of the same principle, namely, the free interchange of productions, would be attended with still more happy results. The attention of Australians having once been engaged by the subject, a way will probably yet be found to attain the end proposed.

Protection.

In the meantime, I think I shall be doing some service to the public by supplementing the few remarks which I considered it not beyond my province to make last year on the subject of protection; and I am the more impelled to do this because the question, in one of its most plausible phases, has recently been brought before the public in more than one of the country districts.

And first, of protection generally. It is a matter of notoriety, that a protective policy has for some time past prevailed in that Colony to which we are most closely bound by the ties of commercial intercourse, namely, Victoria. The following extract from a public journal of that Colony shows what the effect of thus setting at naught the well-established principles of political economy has been:—

"Our imports are less by £3,880,047 than they were in 1866, the last year of free trade; while our exports during the same period have fallen off by upwards of a million. Under free trade our local manufactures were rapidly extending, and we were exporting more than seventy articles of our own manufacture to the neighbouring Colonies; but protection, by increasing the cost of production, and by driving away buyers from other ports, has strangled some manufactures, and crippled others."*

America has often been appealed to as an instance of the success of a protective policy; the following extracts from the report of the Special Commissioner will show how it operates there:—

"The effect of the great increase and disturbance of prices thus noted has been as follows:—

First.—A decrease of production and consumption, and a partial suspension of national development—a result fully in accordance with a well-recognised law of political economy respecting prices.

Another result arising from the great enhancement of prices, above referred to, of all labour and material is, that the products of American industry are exposed to a most unfair competition in their own and foreign markets with the similar offerings of other countries, produced from untaxed raw materials, with the further great advantage of cheaper capital and lower wages for labour. In fact, in nearly every department of American industry, the possession of the home market is seriously interfered with, while our ability to compete with foreign nations in foreign markets is restricted to the sale of a very few articles in which the American producer is largely favoured by natural or accidental advantages, as in the case of petroleum, cotton, sewing machines, and a few other things.

The foreign commerce of the United States is being, as it were, swept from the ocean. * * * *

A reference to the official returns shows the amount of American registered tonnage engaged in the foreign trade in 1865-66 to have been 1,492,924 tons, as compared with 2,546,237 tons in 1859-60; which, allowing for the difference between the old and new measurements, indicates a decrease in five years of over 50 per cent. In 1853 the tonnage of the United States was about 15 per cent. in excess of that of Great Britain, while at the present time it is estimated at 83 per cent. less."

What he says in regard to the importation of Wool is entitled to special consideration, as the late fall in the price of Wool, in consequence of the American market being practically closed against the imports of foreign Wool, by which the supply has overtaken the demand, has been seriously felt by the Wool-growers in the whole Australasian group:—

---

* *The Australasian*, February 29, 1868. It is, however, but fair to mention that some part of this declension must have been caused by the late political situation.

"Thirty years ago the manufacture of broad-cloth constituted from 50 to 60 per cent. of the whole woollen business of the United States; now, it is not probably in excess of five per cent. Why? Because American legislation has not permitted the importation of broad-cloth wools, and the American agriculturists have produced nothing to take their place, and never will until the successful establishment of the broad-cloth industry in the United States has created a constant home demand for 'broad-cloth' wools."

The following extract, published in *The San Francisco Times*, from the annual Circular of a trading firm, is still more definite :—

"The tariff on foreign wools passed by Congress is merely prohibitory. It was established as a protection to wool-growers, but has been anything but a protection; and we believe that so long as such a tariff exists the prices will remain comparatively low.

The wools formerly imported into the United States from Australia, the Cape, South America, &c. were shut off by the Tariff, although they were essential to our home manufactures for mixing with other wool, so as to give variety of productions.

The wools so expelled had to find a market in Europe, and their importation there reduced prices so much as to allow the European factories to produce goods at such a rate that they could be imported into the United States, even with the ruling high duty upon foreign imports, at a lower figure than they could be produced there.

We mean to say that the price of wool would have been higher if no duties had been placed upon it. A protective tariff has always been a double-edged blade, that proves injurious to those who handle it without care."*

This is the invariable effect of so-called protection to the *produce* of labour. When the protection is applied, by means of Trades' Unions or other similar combinations, to *labour itself*, the result is the same, as will be seen by the following extract from a late English paper :—

"The effect of trade combinations in driving trade from old localities has of late been generally alluded to. During the past week a Cotton Mill in Preston has received a large consignment of Spinning Machinery from Belgium, which, notwithstanding the cost of transit, has been supplied at 15 per cent. less than the English prices. Once Preston was a noted place for the manufacture of Machinery, and it supplied a great part of Lancashire; now its Machinery is being actually imported from the Continent."

In Colonel Sykes' Analysis of a Report upon the State of the Empire of France, (1867) it is remarked : "In Machinery the phenomenon had appeared of the Export of Machinery to Newcastle."†

The *Iron Trade Review* (Newcastle) says : "The causes of the stagnation [in the trade] are not far to trace. They are, briefly, *over production* * * * * and the injuries inflicted upon the trade, owing to the action of Trades' Unions."‡

History constantly repeats itself; and the intelligent and prudent will respect its teaching.

Secondly, as to the particular form of protection,—encouragement of the growth of Agricultural Produce.

Startling as the assertion may appear to some, it is nevertheless strictly true, that protection to Meat and Corn is protection *in its very worst form.* For these being necessaries of life, and therefore more largely consumed, or at any rate, more indispensable than any other commodities, the amount of which the consumers are mulcted, or the inconvenience to which they are subjected, for the benefit of one or two classes, is greater, while that portion which is thereby added to the Public Revenue is less, than in the case of any other protected article.

---

* Having shown the evils of the protective system, it may be well to advert to what the Treaty of Commerce between England and France, by removing restrictions to trade, has done for those Countries in regard to one branch of trade, which may be taken as a sample of the rest.

The Imports of Cotton Yarn and Cotton Yarn Waste from France into England were in 1860, 45,322lbs., in 1866, 2,518,635 (being almost entirely "Waste" of Cotton Yarn) : the Imports of Cotton Manufactures were in 1860 valued at £371,774; in 1866, at £589,216.

The Exports of Cotton Yarn and Cotton Manufactures from England to France were in 1860 valued at £222,383; in 1866, at £1,498,894.

The article from which I quote the above, adds : "Though the Cotton Exports to France cannot, compared with the trade we carry on with other Countries, be considered large, they are now in value *seven* times what they were in 1859." (*Journal of the Statistical Society of London*, December, 1867, p. 575.)

† *Ibid.* March, 1868, p. 56.

‡ *Ibid.* p. 87.

We may conveniently consider the subject under the following heads:—

1. The effect upon the consumer.
2. The effect upon production generally.
3. How far the Duty would benefit the producer.

1. We are entitled to assume, as a postulate, that whenever the interests of a minority in a State are incompatible with those of the majority, they must give way—the less to the greater. If it can be shown, therefore, that the general community (that is, the consumers) would be injured by such a Duty, it will be a sufficient argument for its rejection.

Mr. Mill says* :—"A Tax on any one commodity, whether laid on its production, its importation, its carriage from place to place, or its sale, * * * * will, as a general rule, raise the value and price of the commodity by at least the amount of the Tax. There are few cases in which it does not raise them by more than that amount." Again: "One of the commonest cases of discriminating Duties, is that of a Tax on the importation of a commodity capable of being produced at home, unaccompanied by an equivalent Tax on the home production. A commodity is never permanently imported, unless it can be obtained from abroad at a smaller cost of labor and capital on the whole than is necessary for producing it. If, therefore, by a Duty on the Importation, it is rendered cheaper to produce the article than to import it, an extra quantity of labor and capital is expended without any extra result. The labor is useless, and the capital is spent in paying people for laboriously doing nothing. All Customs Duties which operate as an encouragement to the home production of the taxed article, are thus an eminently wasteful mode of raising a Revenue." Speaking of Wheat (and the same applies to Meat) he says: "If the Wheat produced in a Country is twenty million of quarters, and the consumption twenty-one millions, a million being annually imported, and if on this million a duty is laid which raises the price ten shillings per quarter, the price which is raised is not that of the million only, but of the whole twenty-one millions. Taking the most favorable, but extremely improbable supposition, that the importation is not at all checked, nor the home production enlarged, the State gains a Revenue of only half a million, while the consumers are taxed ten millions and a half: the ten millions being a contribution to the home growers."

To apply these arguments to the case in point: 69,673 Sheep and Lambs, and 7001 Horned Cattle (including Calves) were slaughtered in Hobart Town and Launceston during 1867, of which 35,595 Sheep and 1935 Cattle were imported. Now, if but a very small Duty, say five shillings a head on Cattle and a corresponding Duty on Sheep, were imposed, it would either not affect the importation of stock or the price of Meat, in which case the graziers would get no benefit; or if the importation were checked, or the butchers raised the price to the consumer by a farthing a pound (which would be much more than the Duty), the graziers would probably either get no increase of price, or at best only a nominal one, the only class who would substantially profit by the Duty being the butchers. But, again, suppose a higher Duty were imposed, say one pound per head on Cattle, and two shillings and sixpence on Sheep. Granting that the effect of the Duty were to raise the price of Meat by no more than the amount of the Duty (which is almost certainly below what it actually would be), the people of Hobart Town and Launceston would have to pay, say, £15,700 per annum more than before, of which only about £6500† would go into the public Treasury; the remainder being divided as a bonus between the butchers and graziers, the former coming in for the lion's share. But if the price in the two principal Towns were thus enhanced, a corresponding rise would naturally take place throughout the Colony, and thus the burden which the community would have to bear to swell the profits of the favoured few would be about three times the difference between £15,700 and £6500, or £27,600 per annum, and this besides the £6500 which it would have to pay to the State as the amount of Duty; so that the real amount of the Tax would be, not £6500, but £34,100 per annum.‡

The plain truth of the matter is, that unless the Duty raise the price of Meat sufficiently to bear heavily upon the consumer, it affords no benefit to the grower; so that the expected profits of the latter are in exact proportion to the pressure on the former.

---

* Political Economy, vol. II. chap. IV.

† There is some difference between the numbers of imported Stock returned by the Customs Department, and those taken at the Slaughter-houses. The latter have been used in this argument.

‡ The imported Meat being consumed at the two Ports only, Country consumers would contribute nothing to the Revenue.

If the Tax on Stock or Meat were imposed at all, a corresponding Excise Duty should be placed on Stock of Colonial growth, so that the State might have the benefit of the whole Tax, instead of only a minute portion of it.

Live Stock may be imported into the Colony in one of these two ways: (1.) By the Australian grazier himself; (2.) By parties in this Colony.

(1.) The argument which has been put forth, that it is not the consumer, but the Australian producer who pays the tax clearly can apply only to the first case. The Australian importer would certainly pay the duty in the first instance, but would be reimbursed the amount of duty by the increase of price which he would obtain from the Tasmanian consumer.

(2.) But as all, or nearly all the importations of Stock come under the second and not the first case, the argument (even were it based upon some solid foundation, which, I believe, is not the fact*) for the reason above stated falls to the ground. But further, the importers of this class are as much consumers as any other description of Tasmanian colonists; so that the proposition that the tax would fall upon the consumer is thus further proved.

"* * * Attempts have sometimes been made to defend or apologise for restrictions on importations, by endeavouring to show that they oblige foreigners to contribute to the revenue of the nation which has sagacity to profit by them! * * * The truth, however, is that the project is wholly visionary, and that duties on Imports are always paid by the importers, and never by the exporters. The price of every freely produced commodity is determined here, and every where else, by the competition of the producers. Taking all things into account, the articles disposed of to foreigners and to native buyers fetch about the same prices. The circumstance of the commodities which we send abroad being subject in France, the United States, and elsewhere to certain duties, lessens, of course, the demand for them in those countries; but, otherwise, it is of not the slightest consequence to the producers here. They sell their goods indifferently to the foreign merchant, and to their nearest neighbour, for a price sufficient to defray the cost of their production, including profits; and the duties imposed on them abroad, whether they be high or low, make a further addition to their cost, which must obviously be paid by the foreign consumers. It is singular how a different opinion should ever have been entertained; it is obviously without so much as the shadow of a foundation."†

2. "Every tax," says the author whom I have before quoted, "on a commodity tends to raise its price, and consequently to lessen the demand for it in the market in which it [is] sold." If therefore the price of meat were so affected by the duty as to be sensibly raised, the consumption would decrease, the difference in price being compensated by the consumer using less,—and thus production, instead of being encouraged, would be checked. But, after a time, a reaction might possibly take place. The increased price would on this supposition stimulate production, and increase competition, by which the price would be again brought down to its former standard, or even lower; and whenever this fall should have taken place, the grower would be no better off than before, while the imposition of the duty would induce the Colonies affected to make reprisals, and so still further impede the development of our trade.

Moreover, a rise in the price of meat, being one of the necessaries of life, would diminish the demand for labour and the value of wages, and discourage immigration, if it did not even drive residents out of the Colony, and react injuriously upon every department of industry; so that the ramifications of the evil would permeate the whole social system to such an extent that it is extremely difficult to say where it would end. It may be added that whatever tends to impede the development of trade, commerce, and production in other countries, with which we hold more or less closely commercial relations, narrows their power of consumption, and so contracts the market for our own produce. The true view is that which regards all countries as bound together by the tie of a common interest: one cannot suffer without, to some extent, and in some way, drawing others in; and so, on the other hand, when one flourishes, the others will be found in some respect or other to be sharers in its prosperity.

---

* To prove this, suppose that cattle are selling at £6 per head in Melbourne or Sydney, and at £10 here. The importer then gets a gross profit of £4 per head. When the duty is imposed, he may at first only get £3; and the reduction of profit may for a time induce him to suspend his shipments. But when the price of meat here rises (as it certainly would) by the amount of the duty, or more, it is evident that the same margin of profit will be left as at first, if not even a greater. Then (unless the price should have been brought down by competition among the home producers) the importation would, by the ordinary laws of supply and demand, be renewed. The consumer, it will be observed, will still pay the tax.

† M'Culloch's Principles of Political Economy, p. 166.

3. It has already been said that the benefit to the grower would be small compared with the profits of the butcher; besides which, consumers would probably resort to other kinds of food: and thus, what the grower might possibly (for a time) gain by increase of price, he would lose by the decrease in demand.

It is absolutely certain that the benefit which the grower would derive from a protective duty would be but temporary, for such a duty *must*, by at first unnaturally raising the price, produce one of two consequences;—it must either, by encouraging competition by means of an artificial scarcity, bring down prices to such an extent as to leave no profit to the grazier; or else, if the home supply should not be so much increased as to affect the price, importation from abroad would recommence. In either case, an injury would have been done to the consumer, and the producer would be no better off than before.

In regard to the importation of Meat, as well as to all other articles of foreign produce, there are already protective charges in the shape of freight and other expenses.

It is strange that it should never have occurred to the advocates of protection to meat of home growth, that it is just because the price is higher in this than in the sister Colonies, that it is found profitable to import it from thence; and that the true way to discourage importation is rather to reduce the price than to augment it.

There are only two methods by which importation can, without violating the plain principles of political economy, be prevented. 1. By bringing the consumer and producer into immediate relation, the latter coming into the market as a retail dealer, and thus breaking down a monopoly which intercepts his profits; 2. By affording such facilities, in the way of transport, to the home grower, as may enable him successfully to compete with the importer.

The true policy of the graziers is, not to agitate for protection with the view of benefiting a class at the expense of the whole Colony, but to urge on the adoption of the principles partially enunciated in the measure which has recently been disallowed —the Intercolonial Free Trade Bill. The Australian Colonies generally having shown a disposition in favour of the principle of that Bill, it only requires that the present disabilities be removed in order to its adoption; while by putting a protective duty on the produce of those Colonies, they would probably refuse to enter into any agreement with us for the purpose. In fact, the time for reprisals or aggressive measures has gone by: what might have had some show of reason some time since is now a mere anachronism—unjustifiable, impolitic, and absurd.

If the matter be left to the operation of natural laws, it seems likely that before long the manufacture of preserved meat in the Australian Colonies will be so extensively undertaken as to absorb a considerable part of the surplus stock of meat in those Colonies. As a necessary consequence of this and other causes, the price of Live Stock must rise; and the increased price, together with the new markets opened to the trade in other parts of the world, will greatly lessen the inducements to send meat hither. Every rise in the price of meat in the foreign, or fall in the home market, by so far equalising the values, tends to discourage importation; and when the natural course of events has carried this equalising process to a certain point, the import trade in cattle will no longer yield a profit, and the supply from abroad will cease of itself.

It has often been urged that free trade, though it may be proper in an old country, with a large manufacturing interest like England, is not suitable to the circumstances of a young and struggling community like this, whose wealth lies chiefly in its pastoral and agricultural products. It might be sufficient to point in answer to the example of the United States; but the arguments which I have already adduced will (if they have been clearly stated,) show that free trade is, if anything, more necessary in a country like this than in England, which might afford the luxury of protection without feeling its paralysing influence so immediately as in a small and unsettled community such as this is. The *general* laws of trade are the same in all countries and under all conditions; and though their operation is to some extent modified by special circumstances, there is nothing in the case of this Colony to make free trade less applicable than in that of any other country.

Shipping. To revert to the consideration of the returns before us: The Shipping inwards and outwards in 1867 were as follows:—

	BRITISH.		FOREIGN.		TOTAL.	
	Number of Vessels.	*Tonnage.*	*Number of Vessels.*	*Tonnage.*	*Number of Vessels.*	*Tonnage.*
Inwards	595	96,186	3	1204	598	97,390
Outwards	629	102,141	2	613	631	102,754

The total number of Vessels inwards shows a decrease of 7 per cent., and the tonnage a decrease of $9\frac{3}{4}$ per cent., as compared with the numbers in 1866. The number entered outwards was less by one than in 1866, and the tonnage was also less by 3·311.

It is worthy of remark that the tonnage of Vessels cleared at the Port of Launceston and Sub-ports was greater than that cleared at the port of Hobart Town, in the proportion of 52 to 51 nearly. The tonnage of Vessels entered was greater at Hobart Town than at Launceston, but only in the proportion of 49 to 48. Ten years ago (in 1858) the proportion of Vessels entered at the ports of Hobart Town and Launceston was as 91 to 57 nearly.

The number and tonnage of Vessels entered inwards during 1866-7 at the different ports and sub-ports, is shown in the following table :—

	1866.		1867.	
	Number.	*Tons.*	*Number.*	*Tons.*
Hobart Town	227	54,568	222	49,085
Launceston	158	36,368	135	29,945
Ditto, Sub-ports; viz.—				
Circular Head	98	7516	83	7850
Port Frederick.....	73	4813	20	1629
Leith	40	2094	77	5228
Wynyard	44	2363	61	3653
Emu Bay	3	181	—	—
	416	53,335	376	48,305

Steamers. The number of Steamers registered during the year 1867 was the same as in the preceding year.

Shipping registered. The number of Shipping (including Steamers) was also the same as regards the total; but five vessels seem to have been transferred from Launceston to Hobart Town.

Whale Fisheries. In the Whale Fisheries, one additional Vessel was engaged in 1867, increasing the tonnage by 171, and the number of men employed by 16. This increase in the means of capture was not, however, rewarded by an increase in the profits, since the quantity of Oil produced was less by about 150 tuns, the decrease in the value being represented as £15,200.

Coal. The quantity of Coal raised in 1867 is stated to have been 8341 tons, against 14,309 in 1866. The decrease occurred at New Town and at Seymour. The Seymour Coal Company Limited was wound up in December last, in consequence of its inability to obtain additional capital (the original capital having been too small to admit of the Company being successfully worked); and the Mines and plant have since passed into other hands.

Prices of Provisions. The return of the prices of Provisions, &c. at Hobart Town shows that Ale, Bread, Flour, Potatoes, and Rice were dearer in 1867 than in 1866; while Candles, Oil, (Colza), Starch, Beef, and Mutton were cheaper.

A return of the Contract prices of the principal articles of consumption supplied to the Government in 1867 has been added, and will prove useful for comparison in future years.

Rates of Wages.

The Rate of Wages is an important element in estimating the material and social condition of any country. The returns hitherto rendered are so meagre as to afford but a very scanty amount of information in this respect. One of the most important of the producing classes—the agricultural labourers—was altogether omitted; and so was another class—that of Domestic Servants.

It would serve no adequate purpose to enter into an analysis of the return of wages now presented; but, in observing the difference in the rates in various parts of the Colony, one cannot help thinking how much would be saved in some districts to the employer, and gained in others by the employed, by increased facilities of communication, which would have a tendency to equalise the rates throughout the whole Country, and so remove those great inequalities which now militate against the interests of both the classes referred to. I shall have occasion again to refer to this subject when speaking of the prices of agricultural produce.

Trades and Manufactories.

A comparison of the return of Trades and Manufactories affords some instructive results. Turning our attention first to those branches of industry which are subservient to the purposes of agriculture, or in any way minister to it, we find an increase of 4 in the makers of agricultural implements; a decrease of 1 in the number of Bone Mills; of 2 in the number of Breweries; an increase of 1 in the number of Cider Makers, and 11 in the Fellmongers; a decrease of 2 in the Maltsters; of 5 in the Flour Mills worked by wind, of 1 in those worked by steam, and of 2 in those worked by water-power; a decrease of 11 in the number of Tanners; an increase of 8 in the Wheelwrights. As regards some other industries, we find an increase of 7 Cabinet-makers and Joiners; of 1 Coach Builder; 6 Coopers; and of 5 Engineers; and a decrease of 5 Saw-mills and 3 Wool-staplers. The latter is significant, as affording corroborative evidence of the decline of the growth of Wool, as before shown from the Customs Returns. It will be observed that there is a decrease of 11 in the number of Publicans.

III.—Finance.

General Revenue.

The Receipts of the General Revenue (excluding the balance from 1866, but including "Adjusting Entries," £13,128 18*s.* 3*d.*) were £272,952 19*s.* 11*d.*, being £27,531 9*s.* 9*d.* more than in 1866. The greater part of this increase is to be found under the following heads:—Publicans' Licences, £6470; Immigration Commissioners, £4000; Debentures, £9200; Arrears of former years, the accounts of which had been closed, £5261 11*s.* 4*d.*, being chiefly repayments from the British Government. Of the above Receipts, £127,223 17*s.* 4*d.* (including Bond Rents, &c. at Launceston) were derived from Customs' Duties, being less than in 1866 by £2086 14*s.* 8*d.*; £56,087 8*s.* 2*d.* from sources classed as "Inland Revenue," being more than in 1866 by £9034 6*s.* 2*d.*, of which excess £6470, as above stated, were contributed by the Publicans.

The Receipts from Customs' Duties were nearly the same as in 1864; the Inland Revenue nearly the same as in 1862.

The Expenditure charged to the General Revenue was £255,552 0*s.* 8*d.*, being £13,190 13*s.* 2*d.* more than in 1866.

The amounts under their several classes for the two years, 1866 and 1867, stood thus:—

	Year **1866.**			*Year* **1867.**		
	£	*s.*	*d.*	£	*s.*	*d.*
Ordinary Expenditure for the year	182,363	11	2	163,695	0	3
Special Disbursements	31,592	12	7	50,303	19	9
	213,956	3	9	213,999	0	0
Arrears of former years.....	28,405	3	9	41,553	0	8
	242,361	7	6	255,552	0	8

The increase under the head of "Special Disbursements" was caused by the redemption of Debentures to the extent of £15,000, and by a payment of £3500 to the Immigration Commissioners.

In the arrears of former years there was also a large excess, chiefly for Postal Services, Charitable Allowances, and Maintenance of Convicts.

The Receipts of the Land Fund were £124,945 2*s.* 3*d.*, being an increase upon those of 1866 of £33,327 7*s.* 9*d.* They may be arranged, for comparison, as follows :—

	Year **1866.**			*Year* **1867.**		
	£	*s.*	*d.*	£	*s.*	*d.*
Sale of Crown Lands	53,067	0	11	47,053	14	5
Rent of ditto	9223	4	8	8200	10	8
Fees	2113	1	1	2380	2	5
Debentures sold	23,110	0	0	64,568	0	0
Other Miscellaneous Receipts	829	5	0	2742	14	9
	88,342	11	8	124,945	2	3

Land Fund.

The Revenue from Crown Lands was considerably less than in 1866; from Fees somewhat greater. The Debentures sold show a large increase, of which £39,118 were for Public Works, and £1216 were moneys received from the Immigration Commissioners.

The Expenditure from the Land Fund in 1867 was £106,471 7*s.* 6*d.*, which is very nearly the same as in 1866. For the two years, it may be thus compared :—

	Year **1866.**			*Year* **1867.**		
	£	*s.*	*d.*	£	*s.*	*d.*
Ordinary Services	42,139	7	4	42,861	19	7
Debentures redeemed	13,900	0	0	17,380	0	0
New Schools, Immigration, &c.	1108	1	9	6938	14	8*
Public Works—Roads, Bridges, &c.	46,474	0	2	35,229	15	4
Arrears of former years	3119	9	7	4060	17	11
	106,740	18	10	106,471	17	6

The Expenditure by the Commissariat on account of Imperial Services was £67,235 6*s.* 10*d.*, against £56,460 9*s.* 10*d.* in 1866. The increase was probably due to the presence of the additional Military Force.

The Bank Returns show a total of Assets at the end of the year of £1,244,688 10*s.* 3*d.*, and of Liabilities of £669,644 10*s.* 5*d.*

Banks.

The principal features of these Returns for the two years 1866–7, may be thus summarised and compared. Fractions are omitted, for the sake of greater clearness :—

	ASSETS.				LIABILITIES.			
	Specie.		*Debts due to Banks, including Notes, Bills of Exchange, Stock, & funded Debts, &c.*		*Notes in Circulation.*		*Deposits.*	
	1866.	1867.	1866.	1867.	1866.	1867.	1866.	1867.
	£	£	£	£	£	£	£	£
First Quarter	168,044	152,291	1,058,351	1,028,470	88,525	78,472	678,645	651,275
Second Quarter	181,880	154,629	1,012,630	1,041,078	88,429	81,875	682,597	654,944
Third Quarter	170,605	157,419	1,031,593	1,036,904	80,339	72,755	660,960	615,450
Fourth Quarter	165,413	143,471	1,053,848	1,051,633	76,006	68,366	627,479	590,556
Average for the Year	171,485	151,952	1,039,105	1,039,521	83,325	75,367	662,420	628,056

* Including £3258 13*s.* 10*d.* for Defences of the Colony.

With the exception of Debts due to Banks, &c., all the results show a large decrease in 1867. In the case of Specie, the decrease amounted to 11·39 per cent., in Notes to 9·55 per cent., and in Deposits to 5·19 per cent. The indications afforded by these returns confirm the conclusion to be drawn from the accounts of the Customs Department, namely, that production and commerce have been, and still are, rapidly diminishing year by year.

Savings' Banks.

The next Return, relating to Savings' Banks, shows, on the 31st August, a sum of £193,301 3*s.* 11*d.* to the credit of depositors, being less by £1278 4*s.* 6*d.* than in the corresponding half of the preceding year. The total amount received from depositors during the year was £101,646 3*s.* 9*d.*, being at the rate of £1 0*s.* 7¾*d.* per head for the whole population; the total amount repaid to them, £102,924 8*s.* 3*d.*; that is, the sum of £1278 4*s.* 6*d.* before mentioned was taken from the savings of 1866 to make up the deficiencies of 1867.

Post Office Money Orders.

In Post Office Money Orders there was an increase in the number issued, of 463, about 17 per cent., and in the amount, of £1454 1*s.* 8*d.*; in Money Orders paid, an increase of 382 in the number, and of £1363 6*s.* in the amount. Two additional stations for the issue and payment of Post Office Money Orders were established in country districts during the year.

Gold Mining.

The next Return shows, as far as it can be ascertained, the quantity of Gold obtained in the district of Fingal during the year. The yield of the alluvial mines can only be known in so far as it has passed through the hands of the storekeepers or other local purchasers of gold. The quantity thus purchased is stated to have been, 144 ozs. 6 dwts. 2 grs. The Quartz Companies crushed 7677 tons of stone during the year, producing 1218 ozs. 19 dwts. of retorted gold, which would give an average result of 3 dwts. 4 grs. to the ton of quartz. There was an increase in the quantity of stone crushed in 1867, of 4805 tons, and in the produce, of 871 ozs. 3 dwts.

Public Debt.

It appears from the statements relating to the Public Debt of the Colony, that on the 31st December, 1867, the amount of the various Loans authorised, including Debentures not then issued, was £1,073,900. Deducting the £55,000 then remaining unissued, the actual debt of the Government of this Colony was £1,018,900, or £10 6*s.* 11¾*d.* per head for the whole population. In Victoria, at the end of 1866, the indebtedness per head was £13 14*s.* 8½*d.*; in New South Wales, £16 12*s.* 10*d.*; in South Australia, £1 2*s.* 5¼*d.*; and in Queensland, £23 7*s.* 7*d.* The interest of the Debt in Queensland is stated by the Registrar-General to have been at the rate of £1 10*s.* 8*d.* per head; in Tasmania, it was at the rate of £0 13*s.* 1*d.* per head.

It may be useful to state, for the information of persons out of the Colony, who are interested in its financial condition, that of the total debt of £1,018,900, a sum of £300,000, although contracted by the Government, and dealt with in the same manner as all other public loans, was in reality raised on behalf of a private company for the construction of a line of Railway between Launceston and Deloraine, the Government being, by Act 30 Vict., No. 28, protected against loss in respect to the payment of principal or interest, by any sums of money which may be paid by the Colonial Treasurer for those purposes being made a primary charge on the Railway and works, which cannot be taken in execution by any private creditor, so long as the State holds such lien upon the property of the Company. The Governor-in-Council is also empowered by a former Act to levy a rate on the assessed value of property within the Railway district, in order to reimburse the Colonial Treasurer any amounts so paid by him. The sum for which the State is *ultimately* liable, is, therefore, no more than £718,900, or £7 6*s.* 0½*d.* per head.

In proportion to the extent of their respective territories, the debt of the different Colonies stands thus:—Tasmania, £0 1*s.* 2½*d.* per acre; Victoria, £0 3*s.* 2¼*d.*; New South Wales, £0 0*s.* 5½*d.*; South Australia, £0 0*s.* 0¾*d.*; and Queensland, £0 0*s.* 1¼*d.**

From this it will be seen that the lands of Tasmania are very much less heavily mortgaged to the public creditor than those of Victoria. But although this is interesting as a statistical fact, it is not of much weight in a financial point of view; for the security of the public creditor evidently depends, not upon the extent to which the territory of a State is, or is not, mortgaged, but upon the power of the population to pay the interest upon the debt. The security is therefore to be measured by the population, the production, and the amount of accumulated wealth—that is, of taxable property.

---

* These, with the exception of Tasmania, are for 1866.

IV.—Establishments and Institutions maintained or assisted by Government.

Post Office.

The number of Post Offices in 1867 was increased by 3; the number of persons employed was also increased by 3; the mileage of post roads by 27.

In the number of letters received, there was a decrease of 10,295; of letters despatched, a decrease of 2164. The numbers of Newspapers received and despatched were less than those of the previous year by 22,010 and 67,876 respectively. The number received was less than in any year from 1857 inclusive, with the exception of the year 1861, when it fell to 298,812. Town and District letters show a decrease of 4272.

The revenue from the Post Office shows an improvement to the extent of £274 10*s.* 2*d.*; the expenditure a decrease of £457 18*s.* 4*d.*

Electric Telegraph.

The Return relating to the Electric Telegraph shows a diminution in the number of paid messages of 404, and in the number of free messages of 2090. In the amount received for paid messages there was a decrease of £35 15*s.* 10*d.*; and in the total expenditure a decrease of £604 17*s.* 9*d.*

The preliminary arrangements for restoring telegraphic communication between Tasmania and Victoria have now been satisfactorily completed, and in the course of this year the line may be expected again to be at work. The re-opening of this line will confer a great benefit on the public generally, and may be expected to have a very favourable influence on trade.

Penal and Charitable Institutions.

The table given below shows approximately the expense of the various Penal and Charitable institutions, as apportioned to the respective Governments, in the years 1866 and 1867:—

	CHARGEABLE TO			
PENAL.	*Imperial Government.*		*Colonial Government.*

It is gratifying to find that there was a reduction in the cost of these establishments to the extent of nearly £6000. As between the two Governments, the ratio of decrease to the Colonial was 10·6 per cent.; to the Imperial, 12·89 per cent.

In the cost per head of the prisoners and paupers maintained in the above Establishments there is, with one or two exceptions, a considerable decrease, caused to some extent by the decline in the price of provisions. At the Hospital for the Insane at New Norfolk the rate per head appears as if it were slightly in excess of that for 1866, but the true explanation seems to be that an error occurred in the calculation for that year, which was discovered in examining the Return for 1867, and there corrected. At the Queen's Asylum, on the other hand, there would appear to be a decrease per head of nearly £6, of which also a part is attributable to an error in the

* For 1865 and 1866 at Port Arthur there were in 1867 51 Paupers, costing about £1700 15*s.* 11*d.*, whose maintenance should strictly be deducted from the "Penal" and added to the "Charitable" Institutions.

Return for 1866, which was not discovered in spite of the most careful scrutiny. In that year all receipts (except *bonâ fide* money transactions for which credit was taken at the Treasury) were excluded; but it was not discovered until the next year that it had been the practice to charge against the Institution the value of farm produce grown on the land attached to it, and consumed by the inmates. The Return of Expenditure for 1867 includes, as I understand, nothing but actual money expenditure on one side or the other, with the exception of a credit for milk supplied to other Government Establishments, which is now allowed in the books of the Treasury. The actual reduction per head, after taking into account these corrections, is stated by the Principal to be £2 13*s.* 7*d.*

Aborigines.

The Return of the Aborigines in the Establishment at Oyster Cove on the 31st December last, shows that one man and two women were the sole remains of the original possessors of this Island. Three females had died during the year. In a few years more these few representatives of the race will have passed away,—leaving scarcely a single monument, save some few articles preserved in Museums, and a few paintings, to tell that they had ever been.

Municipalities.

In regard to Municipalities, there is only one observation which need be made. On comparing the annual value of rateable property in 1866 and 1867, it will be found that there was a decrease of £6073; while the total revenue and expenditure were somewhat greater.

Road Trusts.

The Road Trusts offer no special ground for remark in regard to the particulars recorded in the return. It is, however, worthy of mention that the Act of last Session, by requiring the Accounts of the Road Trusts to be submitted to a proper audit, as in the case of Municipalities, will greatly facilitate the preparation of future Statistical Returns. Extreme difficulty has hitherto been felt in this respect. In some cases the accounts have been grossly incorrect, and a large amount of reference has been necessary,—sometimes, after all, unsuccessful; and in several instances, I have been informed that the existing Executive Officer of the Trust could make nothing of the accounts, his predecessor having died or refused to afford any information. The provision contained in that Act, that all the accounts shall be made up to the 31st December, is also a great improvement, and will materially facilitate the performance of the Statistician's duties.

Boards of Works.

The Return relating to Boards of Works is presented in a different form from that of last year. It has been found impossible, without a change of system, to obtain from the Boards themselves correct particulars of their expenditure; and the information in the present case has therefore been obtained from the Treasury.

V.—Crown Lands, Agriculture, and Live Stock.

Crown Lands.

Excluding the Islands, there were, in 1867, 738,582 acres of Land leased from the Crown, producing a rental of £7063 3*s.* 9*d.*, which is the rate of £0 19*s.* 1½*d.* per 100 acres. It will be seen by the Surveyor-General's Memo. at the foot of the Return which stands at the head of this section, that the extent of Land under lease has hitherto been very much overstated, in consequence, as he concludes, of the leases as they were thrown up or fell in, not having been always written off. Including the Islands, the total rental in 1867 is stated to have been £8206 3*s.* 3*d.*, being, in round numbers, £1096 less than in the previous year.

The Return of Country Lands (that is, not including Town and Suburban lots) sold during the year shows a total of 293 lots, representing 29,584*a.* 0*r.* 18*p.*, against 397 lots, with an acreage of 61,368*a.* 0*r.* 3*p.* in 1866. It is a noticeable fact that while, in regard to the blocks of over 50 acres, both the number and extent of Land show a large decrease, in regard to those of and under 50 acres, although there is a slight decrease in the acreage, there is an increase of 11 in the number; denoting, it is to be presumed, that the smaller class of Landholders is on the increase.

In the Town and Suburban lots sold there was a decrease in the number of 70; in the acreage of 335*a.* 0*r.* 4*p.*; and in the amount represented by the sales, of £1,234 16*s.* 0*d.*

The average price per acre in 1867 was,—for Country lots, £0 15*s.* 10¼*d.*; for Town and Suburban lots, £4 0*s.* 10¼*d.* In 1866 the price per acre was,—for the former, £0 11*s.* 7½*d.*; and for the latter, £3 18*s.* 2*d.* Thus, the value of the Crown Lands seems to have increased; and it is gratifying, in the face of so many facts pointing to the conclusion that we have hitherto been rather retrograding than advancing, to be able to record the circumstance.

The total area of the Colony is calculated to contain 16,778,000 acres, of which, at the end of the year 1867, 3,739,766*a*. 0*r*. 24*p*. had been alienated; leaving about 13,000,000 still belonging to the State.

Agriculture.

The Return of Land in cultivation during the year ended March 31, 1868, shows a result of 153,588 acres in crop; 103,487 occupied by gardens, and including all cultivated lands not arranged under specific classes; 18,805 under fallow; and 5503 acres of new land broken up during the year: making a total of 281,383 acres. The quantity of land included under the head of "fallow," is almost certainly larger than it should be. Some of the Collectors of the Agricultural Statistics seem not to have understood the term, and accordingly to have comprehended under that title land which having been cropped, has either been laid down in artificial grasses, or else allowed to relapse into a state of natural pasturage. It would not be safe therefore to draw any conclusions at present as to the proportion of land which is strictly treated as fallow,—that is, turned up roughly, and allowed to lie exposed, without a crop, to the action of the elements. Next year, we may hope to gain more perfect information in this particular. Meantime, it may be well to draw the attention of our farmers to the fact (which is not only deduced from the investigations of scientific chemists, but also abundantly attested by practical experience) that where a sufficient supply of manure of a proper description cannot be provided, or where root or similar crops are not grown in rotation, it is *absolutely necessary* that the soil should be thus exposed in order to recover its exhausted energies, and thus to render it capable of bearing a fresh crop. Bare fallows, however, are a wasteful mode of attaining this object, and should never be resorted to where better means of effecting the same end can be found.

The total acreage (including new Land broken up) in cultivation in 1866 was 286,930, or 5547 acres more than in 1867-8; the acreage in farm crops being 167,866, or 14,278 acres more than in 1867-8. The decrease in the land in farm crops in the latter year was therefore at the rate of 8½ per cent.

The acreage under each description of crop in the two years may be thus compared:

	Acreage.			*Acreage.*	
	1866.	**1867-8.**		**1866.**	**1867-8.**
Wheat	71,348	64,010	Turnips	1096	765
Barley	4596	6860	Carrots	176	199
Oats	34,358	27,574	Mangel Wurzel	1349	1089
Peas	3655	4558	Onions	253	221
Beans	508	509	English Grasses	5393	3261
Tares	535	286	Hay	33,762	33,064
Potatoes	10,520	10,768	Tobacco	216	151

All these crops exhibit a decrease—most of them a large one—except Barley, Pease, Potatoes, (the increase on which is very trifling), and Carrots. I am sorry to observe a decrease of about 600 acres of root crops. Until the value of these in fertilising the soil is better understood, and more practically acknowledged, it is to be feared that no great improvement in the system of agriculture can be expected. The culture of the Sugar Beet has lately received some attention here; and it is understood that a wealthy and enterprising colonist is about to undertake the growth of the root, and the manufacture of this description of sugar. If the attempt should be brought to a successful issue, the originator will have conferred a signal benefit on the agricultural interest, and have done much towards the establishment of a more rational and economical system of cultivation.

In Hops, as is well known here, there has been a very large increase, which will in the present year be still further augmented. The increase last year in the breadth of land was 93 acres, and in the produce, 86,900 lbs. This branch of industry, instead of being confined, as heretofore, to New Norfolk, is likely to be extended to many other parts of the Island.

The average yield of the different crops in 1867–8 (excluding Tobacco, which is only grown, as far as I am aware, for Sheep-wash), is shown below.

Wheat, bushels	13·98	per acre.	
Barley, ditto	24·40	,,	
Oats, ditto	22·94	,,	
Pease, ditto	18·64	,,	
Beans, ditto	20·41	,,	
Tares, ditto	19·49	,,	
Potatoes, tons	3·49	per acre.	
Turnips, ditto	6·98	,,	
Carrots, ditto	8·79	,,	
Mangel Wurzel, ditto	10·06	,,	
Onions, ditto	5·05	,,	
English Grass, bushels	18·95	,,	
Hay, tons	1·03	,,	

These results are important, because from them it may easily be calculated what crops are the most profitable to the farmer. For instance, it will be seen that nearly one-fifth of the whole area under crop was in Hay. The mean produce of Hay was scarcely more than one ton to the acre, and in many districts not so much. At £3 per ton, which is about the mean price, the farmer's gross return would only be £3 per acre. When the expense of seed, ploughing, mowing, carriage, and other operations is deducted, it will be found that there is scarcely anything left for profit. Indeed, taking into consideration the exhaustion of the soil, it is questionable whether there would not be an actual loss. It is singular how pertinaciously our farmers adhere to this unprofitable custom of hay growing, when the land might be put to so much better uses.

In consequence of the change which has been made in the time of the year at which to take the returns, they are now, for the first time, presented in such a state as to be safely used for statistical purposes. It is impossible, within the limits of this Report, to enter into a minute analysis of the Crop Return; and I must therefore confine myself to the one product—Wheat. The average yield, as has been already stated, was 13·98 bushels per acre; the maximum, at Glenorchy, being 26·78 bushels, and the minimum, at New Norfolk, being but 4·92 bushels. In regard to the last, the Superintendent of Police reports, that "the Wheat crops were fearfully bad." At Deloraine, the Collector reports that the low yield of wheat "is to be attributed to the prevalence of rust, from which every farmer suffered more or less;" and he adds, "had the Returns been made out at the approach of harvest, they would have been utterly valueless, as many expected forty or more bushels per acre where they did not get ten."

A comparative table of the acreage in the different kinds of Crop from 1857, was given in my last report: it may be interesting now to give the total produce and average per acre of the three principal cereal products for the same period. It should, however, be borne in mind that until the last year, for the reason above referred to, the figures must not be too confidently relied on.

YEAR.	PRODUCE.			AVERAGE PRODUCE PER ACRE.		
	Wheat.	*Barley.*	*Oats.*	*Wheat.*	*Barley.*	*Oats.*
1857....	1,213,807	198,085	676,877	19·11	16·88	21·24
1858....	930,297	202,631	925,110	18·43	18·67	19·38
1859....	1,061,517	151,990	918,881	17·60	20·09	25·38
1860....	1,415,896	126,605	926,418	21·32	20·29	30·57
1861....	1,380,913	169,381	751,475	23·42	23·27	25·89
1862....	1,008,569	199,310	737,633	16·58	21·05	23·68
1863....	953,250	201,852	1,024,134	17·64	20·31	25·46
1864....	839,501	123,320	995,352	13·95	19·51	24·33
1865....	1,273,766	101,504	688,740	17·38	22·42	24·13
1866....	1,528,706	120,780	941,993	21·43	26·28	27·40
1867–8..	894,814	167,404	632,461	13·98	24·40	22·94

I take the following comparative table (in an abridged form), showing the average yield in four of these Colonies of the principal agricultural productions, from Mr. Archer's Report prefixed to the Agricultural Statistics of Victoria for the year 1866–7:—

	Wheat.	*Oats.*	*Other Cereals.*	*Potatoes.*	*Hay.*
Victoria	22·25	30·01	24·03	2·74	1·74
South Australia	14·34	22·29	20·13	2·39	1·32
New South Wales	12·72	20 39	31·31	2·33	1·58
Tasmania	21·43	27·42	22·08	3·87	1·65
Mean.....	16·39	28·57	28·70	2·79	1·54

Mr. Archer remarks: "It will be noticed that the acreable yield of Wheat, Oats, and Hay is highest in Victoria; that New South Wales gives the highest acreable yield of 'other Cereals' (chiefly Maize); that the average yield of Potatoes and Tobacco is highest in Tasmania."

The value of the Imports and Exports of Breadstuffs, Oats, and Barley from 1857 was given in my last Report. A Table is now subjoined showing the quantities, taken from the Customs' Returns.

YEAR.	IMPORTS.				EXPORTS.

As the estimate of the surplus of Wheat available in 1868-9 published in the *Gazette* with the Agricultural Returns for last year has been noticed outside this Colony, it may be well to say a few words on that subject. That estimate was not published without a considerable degree of hesitation, and only under the belief that such information, if at all trustworthy, is calculated to be of considerable advantage to the agricultural and commercial interests. I also desired to demonstrate practically to the farmers the necessity of care and accuracy in returning an account of their crops to the Collectors of the Agricultural Statistics : for if the farmers will not take the trouble to supply the Collectors with correct information, it is evident that implicit confidence can not be placed on the Government Statistics ; and the farmers will have to thank themselves for any ill effects that may arise out of their own carelessness or indifference.

Whether the estimate be reliable or not, I apprehend that it will have served a useful purpose ; and between this and next season, it may be possible to obtain more certain data upon which to base our future calculations.

The prices of agricultural products for the year 1867-8, instead of being included in the Crop Return, as heretofore, have been placed in a separate Return ;—an arrangement which, it is presumed, will greatly add to the perspicuity of the Returns.

An inspection of these prices, with a view to comparing the rates in the different districts, suggests some reflections which may be useful in a practical point of view, and which are worthy of the serious consideration of our agriculturists. To take Wheat as an example : The price at Hobart Town is returned at 8*s.*, at Launceston at 7*s.*, the mean of which, 7*s.* 6*d.*, may be assumed as the average price on March 31, 1868. In two districts, Westbury and Deloraine, it is returned at 5*s.* 10*d.* and 4*s.* 1¼*d.* respectively ; that is, there was a loss, on account of local circumstances, of 1*s.* 8*d.* on every bushel of wheat sold in Westbury, and of 3*s.* 4¾*d.* on every bushel sold in Deloraine. Supposing that the Wheat crops were all sold *in situ*, there would be a loss to the farmers of Westbury of £12,129, and to those of Deloraine of £9103, by the difference in prices. The corresponding loss at Longford would be £13,694. These sums together amount to £34,926. But supposing that the Wheat crops were not sold in the districts, but in the principal marts of the Island, and that the loss were measured by a part only of the cost of carriage, say 6*d.* per bushel, it would still amount to £8079 for those districts. If the same investigation were pursued with regard to all the other marketable produce throughout the Colony, it would be found that, even on the most favourable supposition, the present loss to the farmers from this source is something enormous.

It is not difficult therefore to imagine what an immense gain a system of rapid and easy transport, by equalising prices, as well as by the reduction in the cost of carriage, would confer on the agriculturist in the interior, and what a stimulus it would give to production.

The necessity to the agriculturist of mechanical appliances was strongly urged in last year's Report. The following observations on the necessity of steam power in the cultivation of the soil, which appeared in *The Press* (Lyttleton) of 7th March, are so admirable, that I hope to be pardoned if the introduction of them here may seem to any to be somewhat beyond the scope of a Statistical Report like the present :—

"If New Zealand is to supply the English Market at all in ordinary years, it can only be done by cheap production ; and cheap production can be brought about only by machinery. Of machines for saving the crops by reaping and threshing, we may be said to use our full share. Indeed, we almost doubt whether, acre for acre, any English county has more machinery in use than Canterbury.

At all events a very large quantity of such implements is employed amongst us. But of ploughing and cultivating machines there may be said to be none at all. One, we believe, is at work in Canterbury, and we have heard of four or five in Southland; but the whole amount of land in New Zealand cultivated by steam power is inappreciably small. And yet there is no class of machinery in which such vast improvements have been made in the course of the last five or six years as in ploughs and cultivators. Take, for instance, the Report in the *Times* of the 12th December of the machinery exhibited at the Smithfield Club Cattle show. We find that John Fowler & Co., of Leeds, have exhibited a cultivator for light lands fifteen feet wide, which accomplishes '*five acres an hour, or sixty acres a day in regular work.*' This is far beyond anything of which we have hitherto heard. There is a considerable quantity of land in New Zealand of the light quality to which such a cultivator would apply. But it is not always that the cultivator is suitable: a plough is necessary as well. The same report tells us that Fowler's plough for light land has been brought to such perfection that it can turn over eight furrows at once, at the rate of *two and a half acres an hour, or thirty acres a day*, on light soil in ordinary working. These are achievements in cultivation which must soon remodel the whole system of agriculture. The old-fashioned farms will soon be to the steam-cultivated farms what the hand loom is to the steam power loom. Up to a very few years ago, the manual art of tilling the soil had made no important advance from the earliest periods of history. The ancient ploughs were heavier than the modern ploughs, but that was all. It was virtually the same tool, and no doubt did pretty nearly the same work. But the time is now come when mankind, in civilised countries, is about to be relieved of one of the heaviest burdens laid on them by nature. Slave labour is essential to all great progress; because great power combined, organised, and directed, is indispensable to great results. We no longer use men for slaves, for, apart from the moral and political aspect of slavery, it is no longer necessary. God has given the steam engine as a reward to the nations which have ceased to use their fellow-creatures as slaves. Steam is the slave of all, rich and poor alike; and when its untiring energies are universally applied to the culture of the soil, the whole class of agricultural labourers will be lifted into a higher grade. They will get better wages, better homes, food, clothing, education. Thus, in the working of the economical laws of Providence, the result may be confidently predicted. If, then, New Zealand is to take any part in the supply of the older communities of the world with food, it must be at least up to the mark of the rest of the world in its mode of production. It must produce by means of machinery. Wages will rise higher than ever; but high wages will not mean expensive production, because, by the aid of machinery, one man at ten shillings a day can do as much as ten men at five shillings a day without it. It is the increased produce in proportion to the population resulting from the use of machinery, which enables and compels capital to pay higher wages to labour. We would strongly recommend our agricultural societies to obtain full and detailed statistics as to the most recent improvements in the application of steam to agriculture; and to keep them constantly before the public. It is thus that Capital may be induced to turn its attention to the subject. It would never be worth the while of a small farmer to import one of these costly steam ploughs; but small companies might be formed of ten or a dozen neighbouring farmers, who might combine to purchase one, under mutual conditions as to its use. And thus the use of steam ploughs might become as general as that of reaping or threshing machines."

To the ordinary Agricultural Returns, I have added this year one showing the extent to which mechanical appliances are resorted to in this Colony. A comparison of such a return, year by year, will indicate more surely than perhaps any other method, what efforts we may be making to keep pace with the rest of the world in this respect. It will be observed that there is not a steam plough or cultivator in the Island.

Live Stock.

The number of Live Stock in Tasmania on the 31 March last is stated to have been as follows:—Horses, 23,299, an increase as regards the previous year of 1732; Horned Cattle, 86,598, a decrease of 1772; Sheep, 1,742,914, an increase of 20,110; Goats, 2627, an increase of 141; Mules, 7, a decrease of 4; Asses 5, as in last year; and Pigs 54,287, an increase of 21,028, or 63·23 per cent. The Horses seem to have been more numerous than at any time during the last 11 years; the Horned Cattle are very slightly in excess of the average number in the years 1862-6; the Sheep show an increase upon the same average of 8094, which, considering the ravages of fluke in many districts, is quite as much as can be expected; Pigs were 14,139 above the average, having increased at a rate altogether unprecedented, at least since 1857.

An attempt has been made to ascertain the number of Live Stock running on crown land, but there are serious difficulties to be surmounted before we can arrive at a very accurate result.

When speaking of the Customs' Returns, a table was furnished showing the quantity of Wool exported in the last eleven years, and the average price, as calculated from those returns. To this it may be useful to add another showing the average weight of fleece, obtained by dividing the quantity of Wool exported by the number of Sheep returned.

Year.	*Weight of Fleece.*	*Year.*	*Weight of Fleece.*
	lbs.		lbs.
1857	3·21	1863	2·59
1858	3·16	1864	2·86
1859	3·60	1865	2·81
1860	2·67	1866	2·77
1861	2·39	1867	2·69
1862	3·15		

The average for 1867 probably appears lower than it really was, in consequence of the fact that while the number of Sheep was taken on the 31st March, the exports of Wool were only brought up to the 31st December of the last year. Comparing the averages, however, for the two periods 1857-62, and 1863-7, it is found that the weight of fleece had diminished from 3·08 lbs. to 2·74 lbs. per sheep. The weight in Victoria in 1865-6 and 1866-7, calculated on similar data, was 4·37 in the former, and 5·01 in the latter period, the Sheep being, it is to be presumed, of a larger kind. In New South Wales, in 1866-7, the average weight was 1·87. Whether this advantage on the part of Tasmania over the latter Colony is real or only apparent in consequence of any imperfection in the returns, one thing is clear from this investigation, namely, that as compared with former years, the weight of the fleece of Tasmanian sheep,—unless it can be shown that the Merino has taken the place of animals of larger frame,—has greatly diminished. Under any circumstances, more pains should be taken in improving the breed, and greater care bestowed upon the "getting up" of the Wool.

The Return of Live Stock imported and slaughtered at the public slaughter-houses shows a total of 69,673 Sheep, 7001 Cattle, and 2902 Pigs slaughtered; and of 35,595 Sheep and 1935 head of Cattle imported. The number imported, as given in the Customs' Returns, was,—Cattle, 1864; Sheep, 38,437; Pigs, 5. As compared with the preceding year, there was a decrease of 4814 in the number of Sheep, and 328 in the number of Pigs slaughtered, and an increase of 636 in the Cattle.

The number of Cattle, Sheep, and Pigs to each head of population, and to each square mile of territory, in each of the Colonies, is shown below.

COLONIES.	CATTLE.		SHEEP.		PIGS.	
	To an Individual.	*To a Sq. Mile.*	*To an Individual.*	*To a Sq. Mile.*	*To an Individual.*	*To a Sq. Mile.*
Tasmania	·19	3·30	17·70	66·49	·55	2·07
Victoria	·93	6·90	13·72	101·73	·12	·86
New South Wales	4·11	3·70	26·80	24·14	·32	·29
South Australia	·73	·32	23·12	10·20	·03	·01
Queensland	9·56	1·35	75·69	10·73	·14	·02

VI.—Law, Crime, &c.

The number of persons committed for trial in 1867 was 227 against 238 in 1866; a decrease of 11, or 4·62 per cent. Committals for trial.

The number of Criminals dealt with by the higher Courts was as follows:— Criminals tried.

	FELONIES.		MISDEMEANORS.		TOTAL.	
	Convicted.	*Acquitted.*	*Convicted.*	*Acquitted.*	*Convicted.*	*Acquitted.*
Supreme Court	81	28	14	4	95	32
Recorder's Court, Launceston	28	13	4	2	32	15
	109	41	18	6	127	47
Number Tried	150		24		174	

In the number tried there was a decrease, as compared with the preceding year, of 26, or 13 per cent. The proportion of Misdemeanors to Felonies was 1 in 6.

The ratio to population in 1867 was—Criminals tried, 1 in 566 or 1·77 per 1000; convicted, 1 in 775 or 1·29 per 1000. The convictions in 1866 were 1 in 682, or 1·592 per 1000.

Neither in 1867, nor in 1866, was any criminal executed. Executions.

Litigation. Considerable improvement has been made on this occasion, as regards the Returns of Litigation, both in the Supreme Court and in the Courts having the jurisdiction of Courts of Requests. It is believed that they are now as complete as it is possible to make them.

Probates, &c. A Return has this year been added of the Number of Probates and Letters of Administration granted by the Supreme Court. The number of Probates was 53, representing property to the value of £118,335; of Letters of Administration 21, representing £24,087.

Insolvencies. The number of Insolvencies during 1867 was 107, or 43 more than in 1866. The amount of Scheduled Assets and Liabilities in the two years is shown below.

ASSETS.		LIABILITIES.	
1866.	**1867.**	**1866.**	**1867.**
£ s. d.	£ s. d.	£ s. d.	£ s. d.
24,295 17 6	47,806 4 6	44,992 16 4	95,730 19 8

The total Assets in 1867 thus appear to have been nearly double those of the preceding year, the Liabilities considerably more than double. The amount for which each Insolvent failed was, on an average, £895, or £192 more than in 1866. The number of Insolvents in proportion to population was 1 in 920. In Victoria, in 1866, one person in every 584 was insolvent; and the average of each Insolvent's liabilities was £531. In New South Wales in the same year (an exceptionally severe one) one person in every 726 was insolvent; and the average amount of liabilities was £1589. In Queensland 1 in 616 was insolvent, with an average liability of £1847.

Mortgages. The number and amount of Mortgages upon Land registered in 1867 were—

	NUMBER.	AMOUNT.
		£ s. d.
Under the old system	222	122,198 16 5
Under "The Real Property Act"	86	37,942 0 0
TOTAL	308	160,140 16 5

The number was less by 8 than in 1866, but represented a larger amount, to the extent of about £4000.

Lands' Titles Office. The Return of the business of the Lands' Titles Office for 1867 shows a decrease in the number of transactions of 82; in the acreage of land dealt with, of 17,265; and in the value of the land, of £54,826.

Inquests. The number of Inquests in 1867 was 150 (105 males and 45 females), being 19 less than in 1866.

VII.—Education, Religion, &c.

Schools. The returns relating to Public Schools under the Board of Education have not been received for 1867, and do not, therefore, appear in the present volume.

Ecclesiastical. An attempt has been made to obtain for the past year certain particulars from the various religious bodies, which, it is believed, would be of interest, and might become practically useful. Circulars were sent with that view to the different governing bodies, and to Ministers of Churches; but to 8 out of 20 no replies were received. The return is therefore presented in a very incomplete state. Perhaps on the next occasion more information will be supplied.

Sunday Schools. The Return of children receiving instruction in Sunday Schools labours under the same imperfection as the preceding return.

That of Friendly Societies has now been added for the first time. It was designed to furnish the information in the last publication ; but the time was too limited to allow the intention to be carried out. Friendly Societies.

VIII.—Vital Statistics.

The Births registered during 1867 were 2971, being an increase of 166 upon those of 1866. The proportion of boys to girls born was 102·66 to 100. In 1866 it was 104·12 to 100. The male births were therefore considerably below the proportion in the previous year. The Birth-rate for 1867 was 30·18 per 1000, which is greater by 1·37 per 1000 than in 1866, but less than the mean for ten years by 4·50 per 1000. Births.

The Deaths registered were 1413 within, and 5 beyond, the limits of the Colony, being 91 more than in 1866. The Death rate in 1867 was 14·36,* being 0·62 per 1000 more than in 1866, but 1·87 per 1000 below the rate for the 10 years, 1857-66. The deaths of males were 864, and of females 554, being in the proportion of 156 to 100 ; or about half as many more. In England the proportion for 27 years was as 103 to 100 ; the maximum being 105 to 100. The proportion in each of the other Colonies in 1866 was as follows :— Deaths.

Victoria.....	133 to 100
New South Wales.....	148 to 100
South Australia.....	126 to 100
Queensland	158 to 100

This result is very remarkable, showing, as it does, how much larger a proportion of men die in the Colonies than in the old countries. The whole subject is worthy of a much more minute investigation than it can receive in a report like the present.

The proportion of Deaths of persons of 70 years of age and upwards to the total number of known ages, in Tasmania for the five years comprised in the period 1863-7, was 11·77 per cent. In Victoria in 1866, it was only 2·277 per cent. In Queensland, the proportion of deaths at the age of 55 and upwards for the most favourable of six years was only 7·74 per cent. of the whole number of Deaths of the year. In South Australia, the number from 50 and upwards only amounted in 1866 to 12·23 per cent. of the known ages. It thus appears that the climate of Tasmania is exceptionally favourable to longevity.

But, favourable as the climate of this Colony is to health and longevity, it might be rendered still more so, were the most ordinary sanitary measures taken to preserve the purity of the air in the principal towns. Nothing, I believe, but the extreme rarity and absorptive power of the air has saved us from the usual consequences of the neglect of proper precautions in this respect. The following from the Report of the Registrar-General of England in the Journal of the Statistical Society of London, October to December last, shows what can be done by a better system :—" Salisbury continues to furnish an instance of the advantages resulting from good hygienic arrangements ; it is more than six years since the Census was taken, and the present population of towns can only be approximately estimated, but, assuming that Salisbury has increased in population since 1861 in the same annual ratio as in the previous ten years, then the mortality during the quarter has been at the low rate of 10 per 1000 annually, a result as creditable to the authorities as it is satisfactory to the citizens, whose years of life are prolonged. That the healthiness of this city is mainly owing to the sanitary system now in operation, and not chiefly to advantages of situation, is proved by the fact that during the ten years 1841-50, the average annual number of Deaths was 28 per 1000 living, and in the following ten years it was 24 per 1000 : it also suffered severely from epidemic cholera in 1849."

Tbe number of Marriages in 1867 was 597, an increase upon 1866 of 26, or 4·55 per cent. The ratio per 1000 of population was 6·06, against 5·86 in 1866. The rate was 1·74 per 1000 below the mean for ten years, 1857-66, and was the lowest for any year, with the exception of 1866, of the series. The rate in Scotland ranged, during the eleven years 1857-67, from 6·5 to 7·5 per 1000. From the Report of the Registrar-General of England of 1866, it appears that the Marriage rate ranges in England from 8·02 to 8·94 per 1000 ; in France from 7·54 to 8·47 ; and in Austria from 7·38 to 9·77. Marriages.

The number of cases of Disease treated in Charitable Institutions during the year 1867, is stated to have been 2266, and the number of Deaths, 216. There was, Diseases and Deaths in Charitable Institutions.

* Only one " transported offender " died during the year, and no correction is therefore needed on this account.

therefore, an increase on the cases of 52, and on the Deaths of 11. The death rate, calculated on the number of "cases," was 9·53 per cent. In six General English Hospitals the mean death rate for five years (calculated on the "admissions") is stated to have been 9·8 per cent.*

Five cases of Scarlatina are returned in 1867 at the Queen's Asylum; 2 of Diphtheria at the General Hospital, Hobart Town, and 1 at the Hospital, Campbell Town.

Vaccinations.

Only 8 persons were vaccinated at the Public Medical Institutions during 1867.

Conclusion.

It will have been seen that a review of the condition of the Colony in 1867 presents but few encouraging features: in almost every direction the same law of decadence is found to have been in operation as in the preceding years; but there are now certain circumstances which afford reasonable hope that before long the aspect of affairs in this Colony will have been much improved. Since the writing of this Report was commenced, the "dead-lock" in Victoria has been brought to an end: and with the resumption of payments there, the trade with this Colony may be expected to revive. The renewal of Telegraphic communication with that Colony will also conduce towards the same result. Since the Statistics of 1866 were published, the credit of this Colony as a borrower has been established on the London Stock Exchange, and there is therefore now no difficulty in obtaining money for the improvement of the public estate. The present state of the English money market is peculiarly favourable for financial operations: the distrust which has been felt by capitalists in regard to European investments has turned their favourable attention to Australasia as a field for the profitable employment of capital. The lively interest which has been shown in hop-growing promises to add largely to that branch of our productions; a tender for the construction of the Launceston and Western Railway has now been taken, and the work must be completed within 20 months from its commencement; the Mersey Railway is also understood to be favourably progressing; and the agitation which has lately sprung up in other districts for improved means of internal communication, will, if it be carried to a practical result, remove the chief difficulty which the farmer has to contend against, and bring to light many latent sources of wealth. The Colonists seem gradually becoming habituated to the idea, that competition with other countries is simply impossible, unless the competitor avails himself of the best aids to progress which the age affords; and the need being thus acknowledged, it may be hoped that steps will soon be taken to supply it. On the whole, therefore, there is more ground of encouragement as regards the future than has appeared for several years past.

I have the honor to be,
Sir,
Your most obedient Servant,
E. C. NOWELL, *Government Statistician.*

---

* Dr. Guy, in Journal of Statistical Society of London, June 1867, p. 294.

* The decrease in Glenorchy is to be accounted for by two Parishes having been taken from it and added to Hobart Town since 18

† The decrease in Selby is attributable to the same cause, two having been added to Launceston.

[Compiled from a Return furnished by the Collector of Customs, Launceston.]

E. C. NOWELL, *Statistician.*

* An error, having been discovered in the Customs Returns for Launceston for 1866, is here corrected. In the Return (Statistics of 1866, p. 34) of Imports, under the article "Drapery," *for* £168,863, *read* £108,863; and in the total value of the same article, *for* £192,284, *read* £132,284. Corresponding corrections should also be made at pages 31 and 52.

Add other Gold purchased by Storekeepers	—	—	—	—	38 19 0	143 0 1					
					144 6 2	532 16 0					

[a] From January to September.

[b] This is only an Estimate.

[c] Not stated.

[d] The Secretary reports :—"The average cost of crushing cannot be given, in consequence of accounts for permanent works and crushing not having been in all cases kept separate at the mine."

In forwarding the particulars from which the above Return is compiled, Mr. W. H. Walker, the Council Clerk at Fingal (to whose courteous co-operation I am indebted for the greater part of the information furnished), says :—"I take the opportunity of sending certain information.....and a Memo. or Return of certain Gold purchased by the Storekeepers at Mangana..... but the quantity therein stated cannot be received as the total of Gold obtained during the year, it being well known that quantities of Gold are obtained from alluvial diggings, of which it is impossible to make any return."

E. C. NOWELL, *Statistician.*

PUBLIC DEBT.

MEMORANDUM of the Amount of the various LOANS *of the Government of* TASMANIA.

	£	s.	d.
Consolidated Loan, (see Statement A)	700,000	0	0
Debentures redeemable in Hobart Town, (see Statement B)	318,900	0	0
Debentures authorised but not issued, (see Statement C)	55,000	0	0
	£1,073,900	0	0

W. LOVETT, *Assistant Colonial Treasurer.*

Colonial Treasury, Hobart Town,
31 *December*, 1867.

THE Rate of Interest paid upon all the Loans hitherto contracted by the Government of Tasmania is 6 per cent. per annum. The Interest upon the Debentures authorised by the Consolidation Act (Return A) is payable on January 1st and July 1st in each year: upon all other Debentures on such dates as the Governor in Council may appoint.

Passenger's Baggage arriving in the Colony at any time not being more than Twenty-one days after the owner thereof, upon special application, and proof to the satisfaction of the Collector of Customs that the articles sought to be exempted from duty are *bonâ fide* Passenger's Baggage.
All Goods imported for the use of Her Majesty's Government.

Drawbacks.

There is allowed upon the exportation of the following articles and goods imported into the Colony; viz.—Wine, tea, sugar, coffee, cocoa, chicory, currants, raisins, dates, rice, hops, malt liquors, candles, ginger, pepper, sago, manufactures of silk, cotton, linen, and wool; drapery, haberdashery, hosiery, millinery, furs, hats, boots, shoes, wool-bags, and cornsacks, being in the original packages in which the same were imported, a drawback of the Duty paid thereon; and upon the exportation of jam manufactured in the Colony a drawback of two pounds eight shillings for every ton nett weight of jam: provided that the exporter or manufacturer gives notice in writing to the Collector of his intention to pack jam for export; and the Collector is required upon the receipt of such notice, either himself or by an officer of Customs appointed by him for such purpose, to view such jam, and also to seal the case or cases in which such jam is packed: provided always that proof be made to the satisfaction of the Collector that the full duties due on importation have been paid.

No drawback is allowed upon the exportation of jam in any quantity less than one ton, or on any other goods entered for drawback unless the Duty on such goods amounts to Ten Pounds, and unless such goods are shipped within three years from the day of importation thereof, or in the case of the exportation of jam manufactured in the Colony, within one year from the time when the exporter shall declare the same to have been manufactured, or in the case of malt liquors within one year from the day of importation thereof: and any person making such declaration falsely in any particular is subject to a penalty of not less than One hundred Pounds.

Drawback of Duty is allowed upon Carriages imported by Visitors for their private use, upon re-shipment within three calendar months of date of inward entry.

[a] Does not agree with the balance given last year, which is stated to have been incorrect. [b] Includes salaries of Clerk, Collector, and Treasurer, for 1866 and 1867. [c] Including repayments, £86 13*s.* 6*d.* [d] These amounts have been taken from the *Gazette.* The present Chairman states that the accounts were found by him to be in a state of utter confusion. [e] Proclaimed, 18 Feb. 1867. [f] Proclaimed, 15 July, 1867. [g] The amounts are corrected from the accounts published in the *Gazette.* [h] Includes £100 repayment of Debt on Bridge, leaving £100 still due. [i] Including balance owed from last year, £646 8*s.* 7*d.* [k] The discrepancy between this sum and that given in last Return is apparently caused by the accounts for 1866 being made up to the middle, instead of the end of the year. [l] Also, 6*d.* in the pound for the purposes of the South Esk Bridge. (*Vide* Bridge Trusts, *infra.*)

Where, under the column "Amount of Rates in the £," two figures are given, the first shows the rate upon private property, the second that upon land rented from the Crown.

The above particulars are compiled from Returns furnished by the Chairmen of the respective Trusts, corrected, in some cases, by reference to the Accounts published in the *Gazette.* From Templeton no Return has been received, though repeatedly applied for.

The Balances for and against the Trusts are distinguished by the signs *plus* (+) and *minus* (—) respectively.

E. C. NOWELL, *Statistician.*

MEMO.—The Returns hitherto furnished of the Area of Crown Land under Rental have, for many years past, shewn a considerable excess beyond the actual quantity under lease, which has only lately been discovered, since the last Returns were prepared. It is difficult now to account for the very great discrepancy; but it may have arisen, in some measure, from the fact that, *after* the annual Returns are made up, lists of persons who have failed to pay rent are received from the Colonial Treasury, and they have not been taken into consideration when the Returns for the following year have been prepared.

J. E. CALDER, *Surveyor-General.*

Hernia	1	—		115	20
Hepatitis	1	1			

JNO. A. MOORE, *Acting Superintendent and Medical Officer.*

* This apparent inconsistency is caused by one case only having appeared in the books as *treated* for Brain disease, while *eight* (8) deaths were found absolutely to have occurred from that affection, though the subjects of them may have been under treatment for other complaints.

G. F. HUSTON.

VACCINATION.

RETURN of Vaccinations *at the* General Hospital, *Hobart Town, during the Year* 1867.

Place.	*Medical Officer.*	*Number of Cases operated upon.*			*Number of the foregoing seen on the Eighth Day after Vaccination.*	*Number where the results were in every respect successful.*	*Remarks.*
		Under Six Months old.	Over Six Months old.	Total.
